Valley Pawn
ONLINE INVENTORY PROPOSAL

Your shelves, online. Always current.

A searchable storefront for your customers, and an owner portal that updates straight from the spreadsheet you already keep.

Prepared by **Douglas Richman**

October 2026

THE OPPORTUNITY

Customers shop online before they ever walk in the door.

1

They search first

People look up "drill near me" or "used guitar" on their phone. If your stock isn't online, they find someone else's.

2

"Do you have…?" calls

Staff spend time on the phone describing what's in the case. A link answers that question before they dial.

3

Stock changes daily

Pawn and resale inventory turns over fast. A website is only useful if keeping it current takes minutes, not hours.

THE SOLUTION

One website, two sides.

A storefront for customers

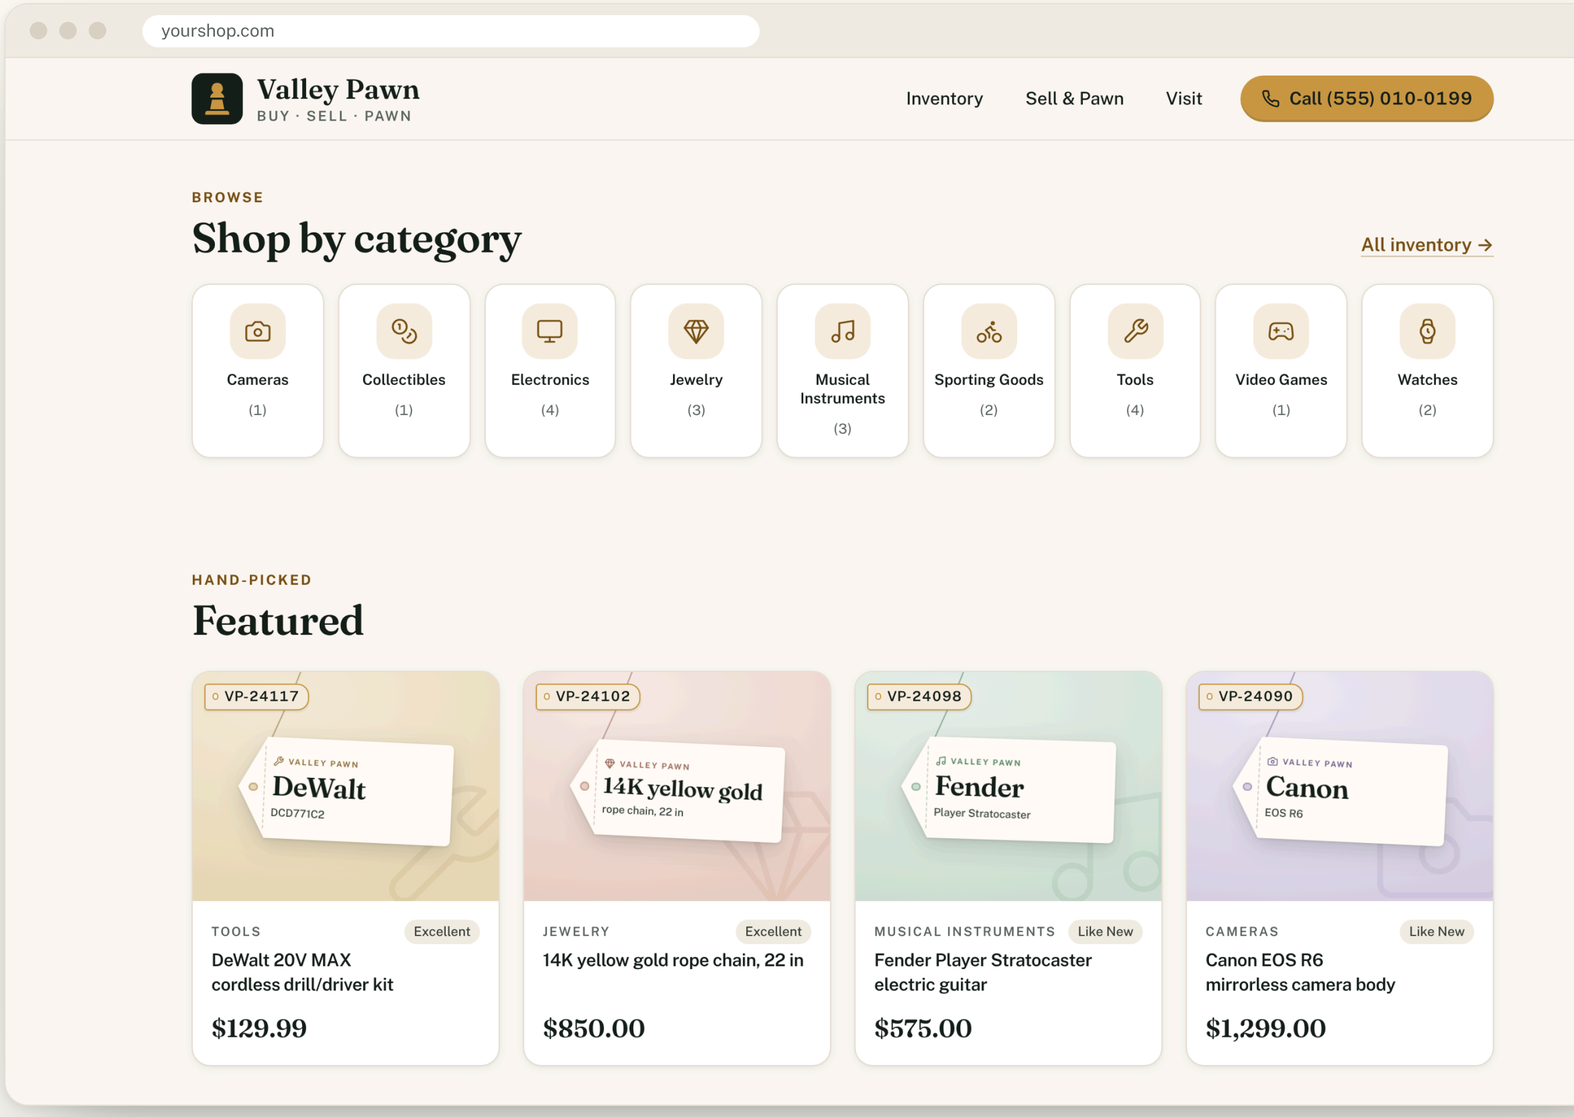

Browse, search and filter everything that's for sale, with prices, condition and item numbers.

An owner portal for you

Upload your inventory spreadsheet, preview the changes, publish. Add photos from your phone.

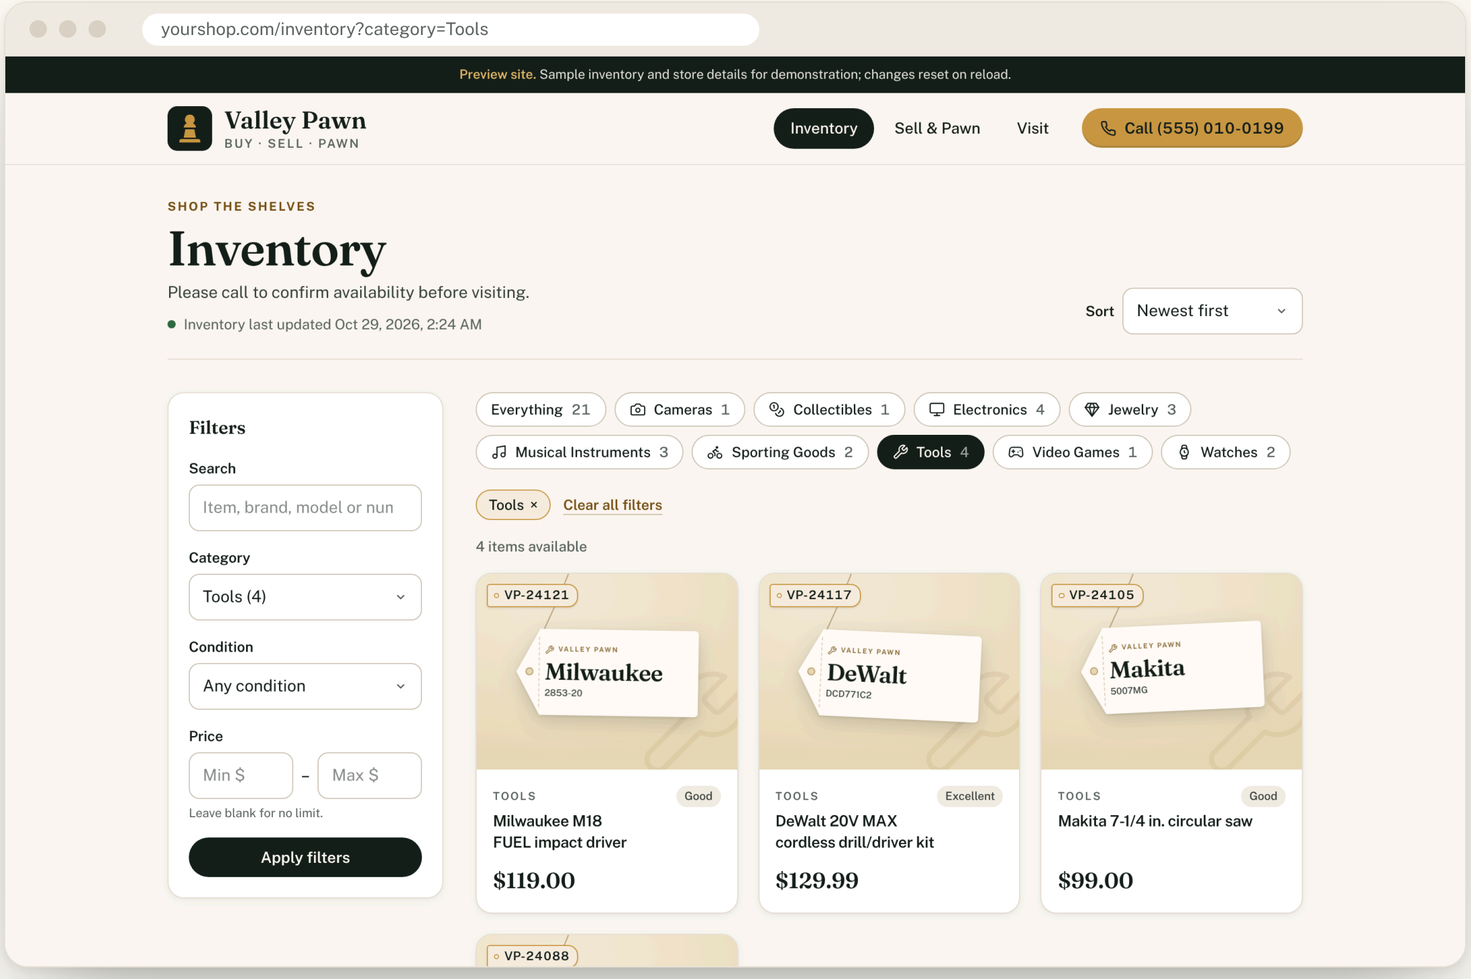

Built to bring people in

Every page leads to one action: call the shop with the item number, then come pick it up.

FOR YOUR CUSTOMERS

Find anything in seconds.

Search everything

By item, brand, model, or the number on the shelf tag.

Filter and sort

Category, condition and price range. Newest first or by price.

Shareable links

Every search and every item has its own link to text or post on Facebook.

Always current

The site shows when inventory was last updated, so customers trust it.

FOR YOUR CUSTOMERS

Every item gets its own page.

Matches your shelf tag

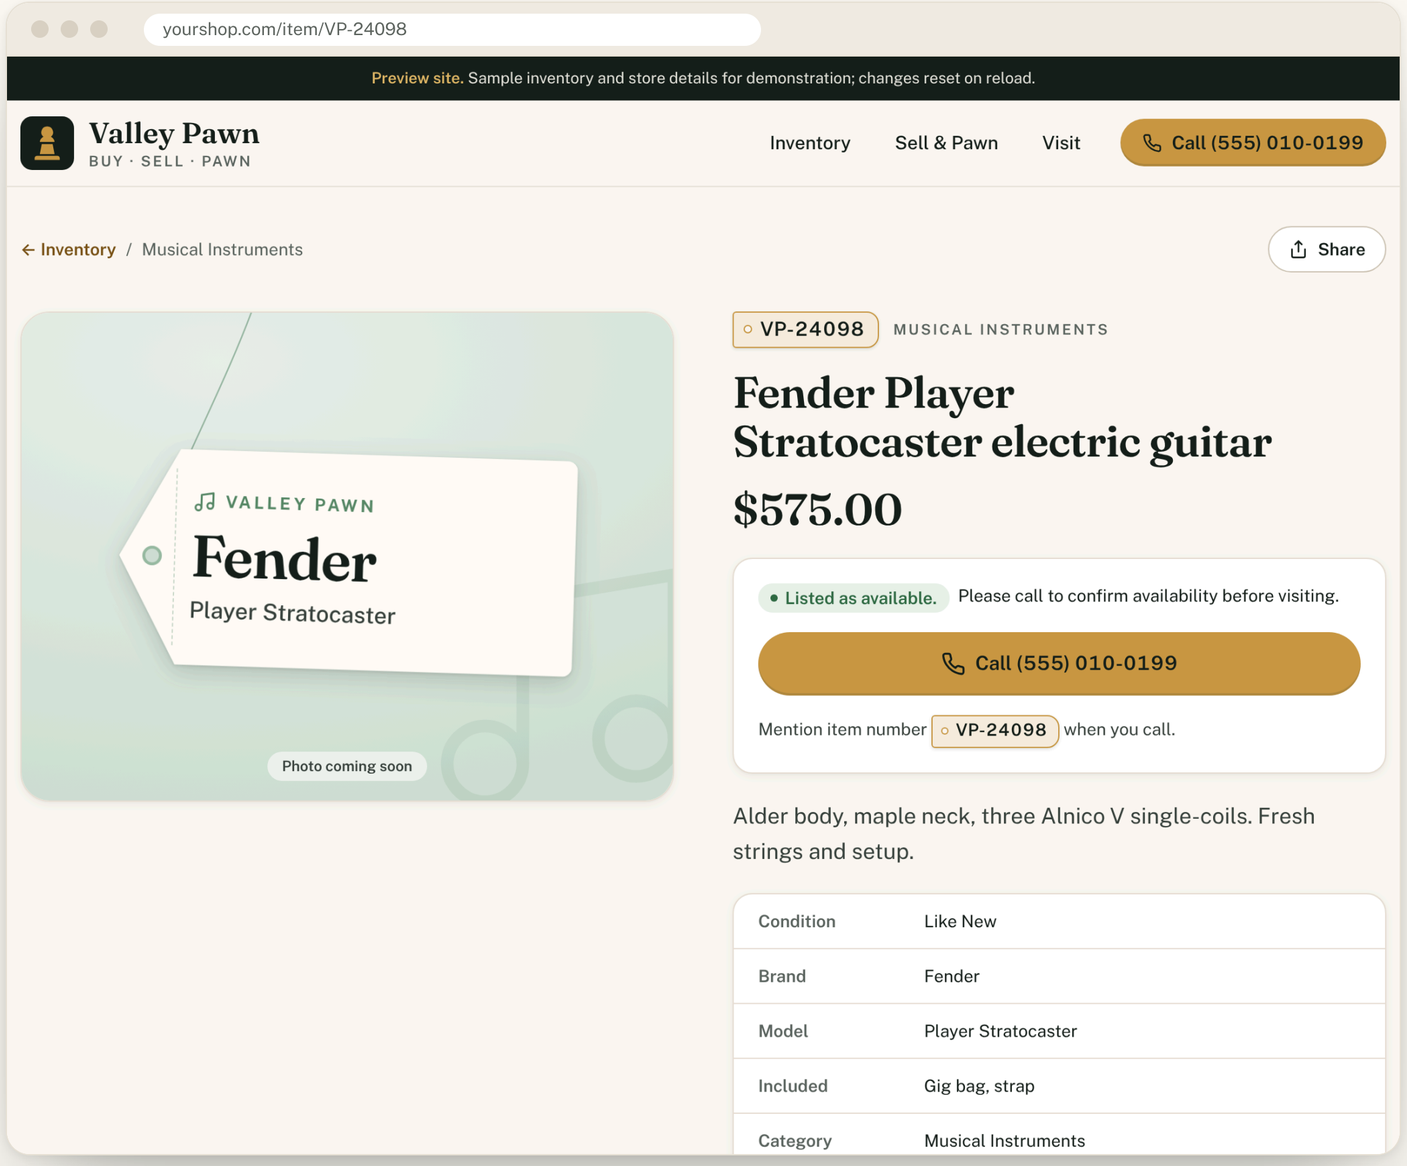

The item number ○ VP-24098 is the one on the tag, so the call is quick.

One tap to call

A big gold Call button on every item, everywhere.

Sold means sold

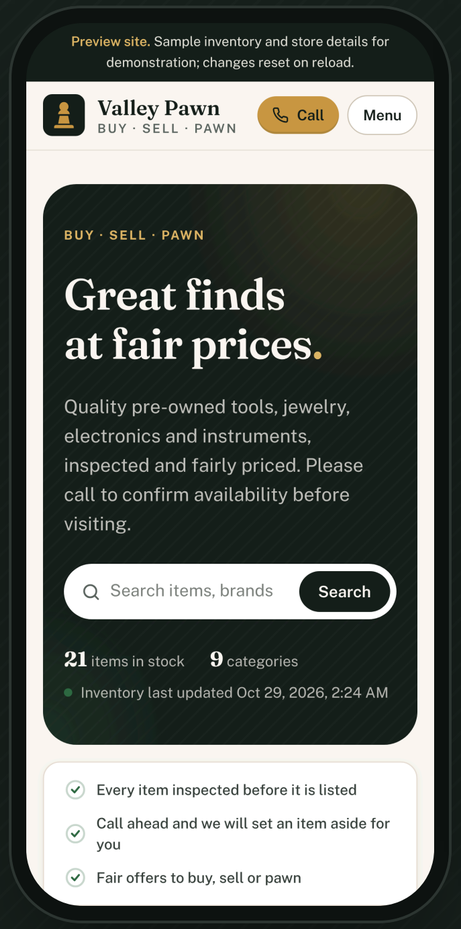

Old links show "Sold" with similar items, never a dead page.

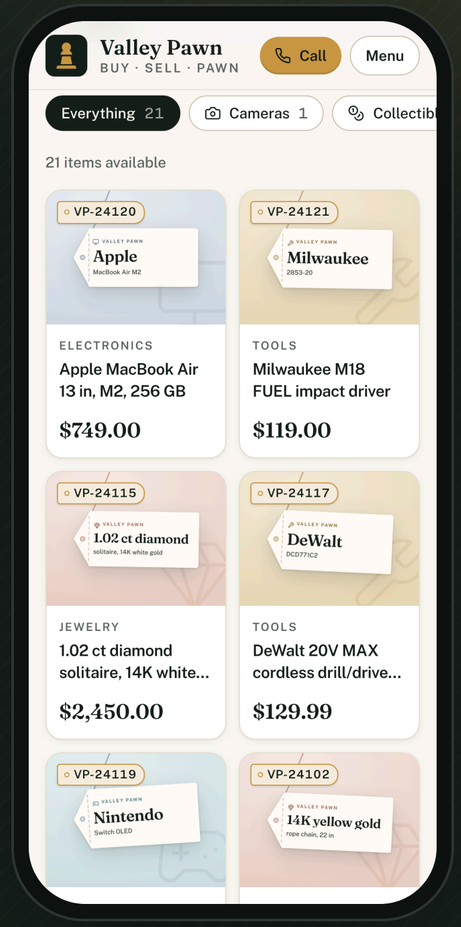

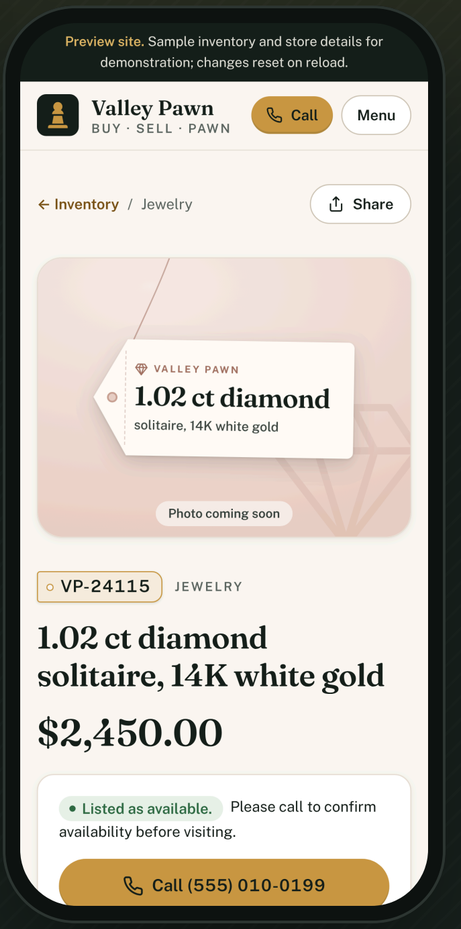

FOR YOUR CUSTOMERS

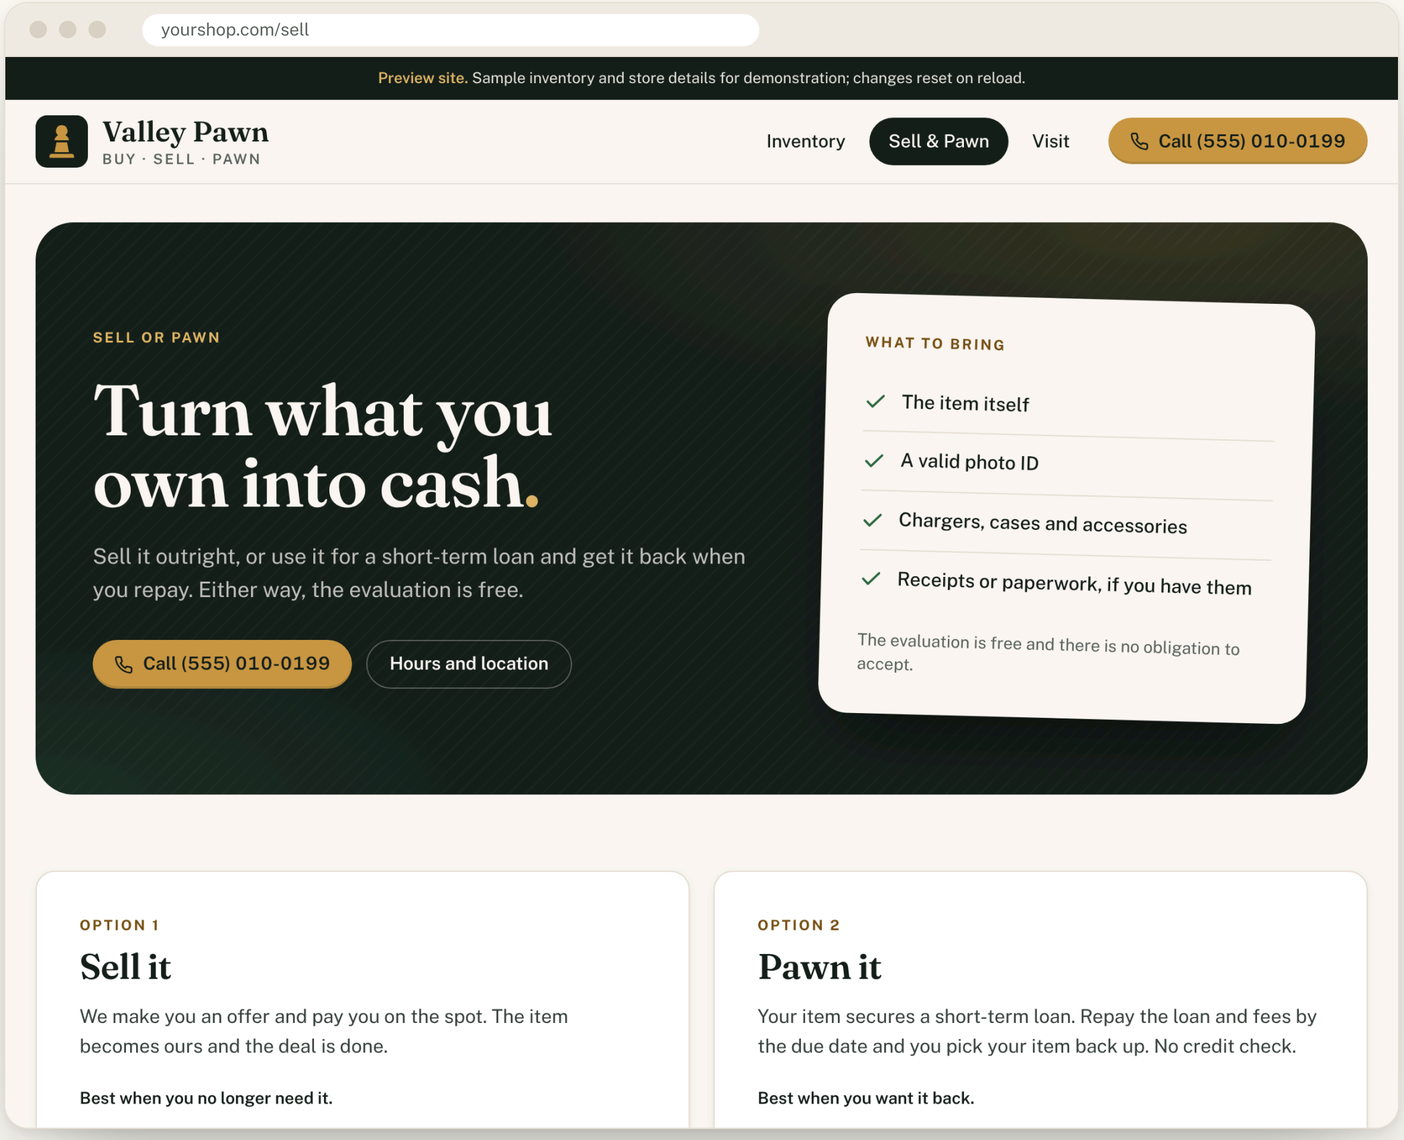

Made for the phone in their pocket.

Most shoppers will find you on a phone. Every screen is designed for it first: big tap targets, a Call button always in reach, and pages that load fast on a cell signal.

FOR YOUR BUSINESS

Bring in sellers, not just buyers.

Buying and lending is half of a pawn shop's business. A dedicated page explains selling and pawning in plain language and sends people to the counter with the right things in hand.

Sell or pawn, side by side
Clear choice between selling outright and a short-term loan.

Your list, your wording
Shows only what you buy and lend on, and only once you turn it on.

FOR YOU

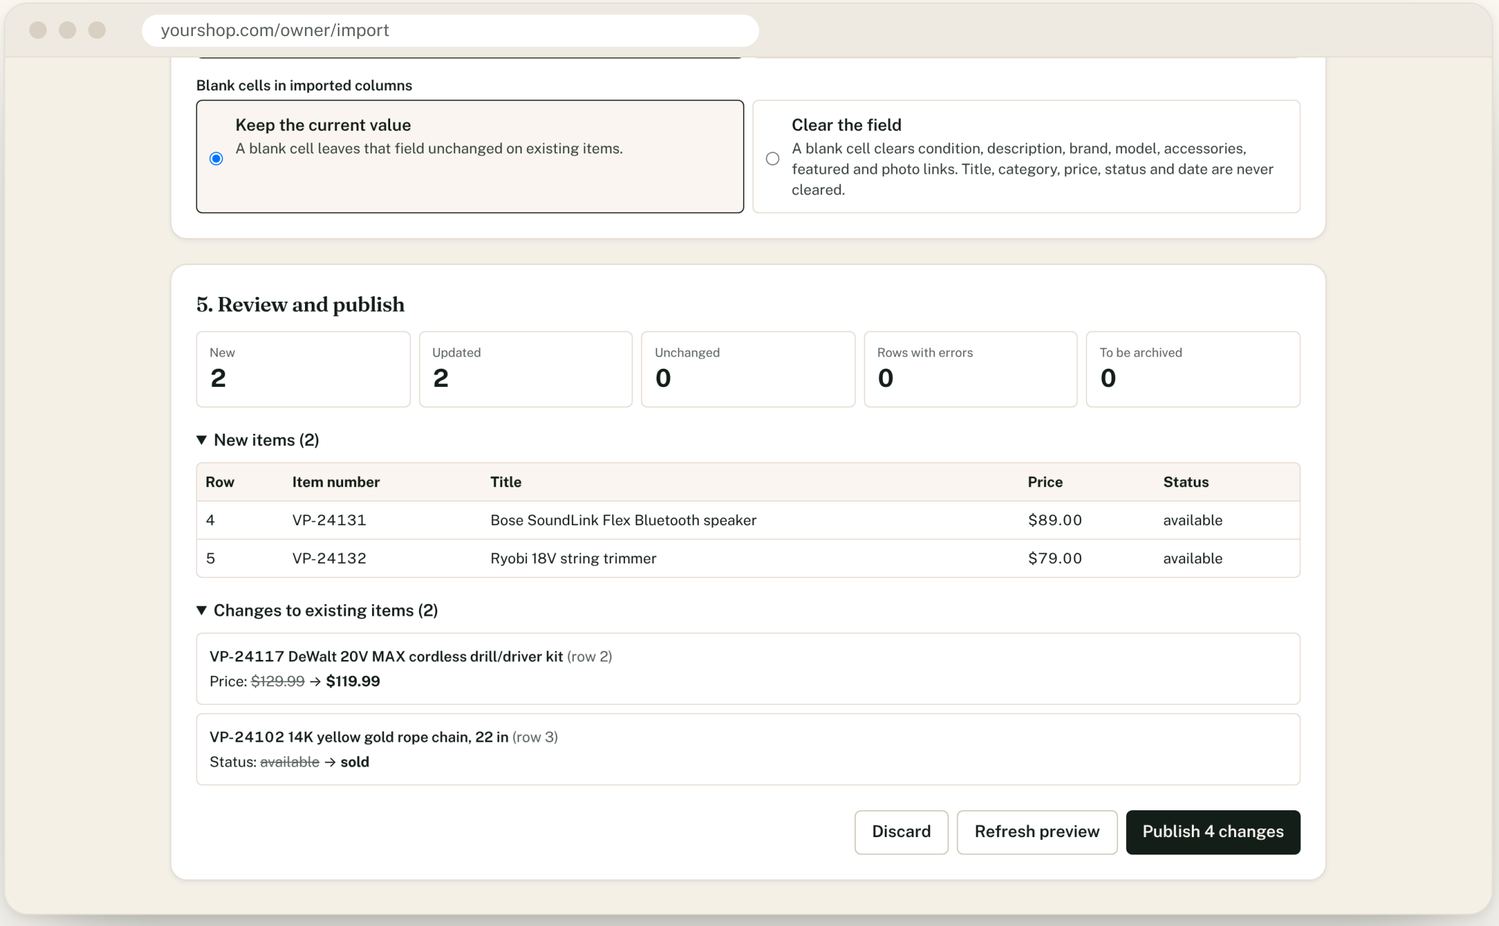

Update it from the spreadsheet you already keep.

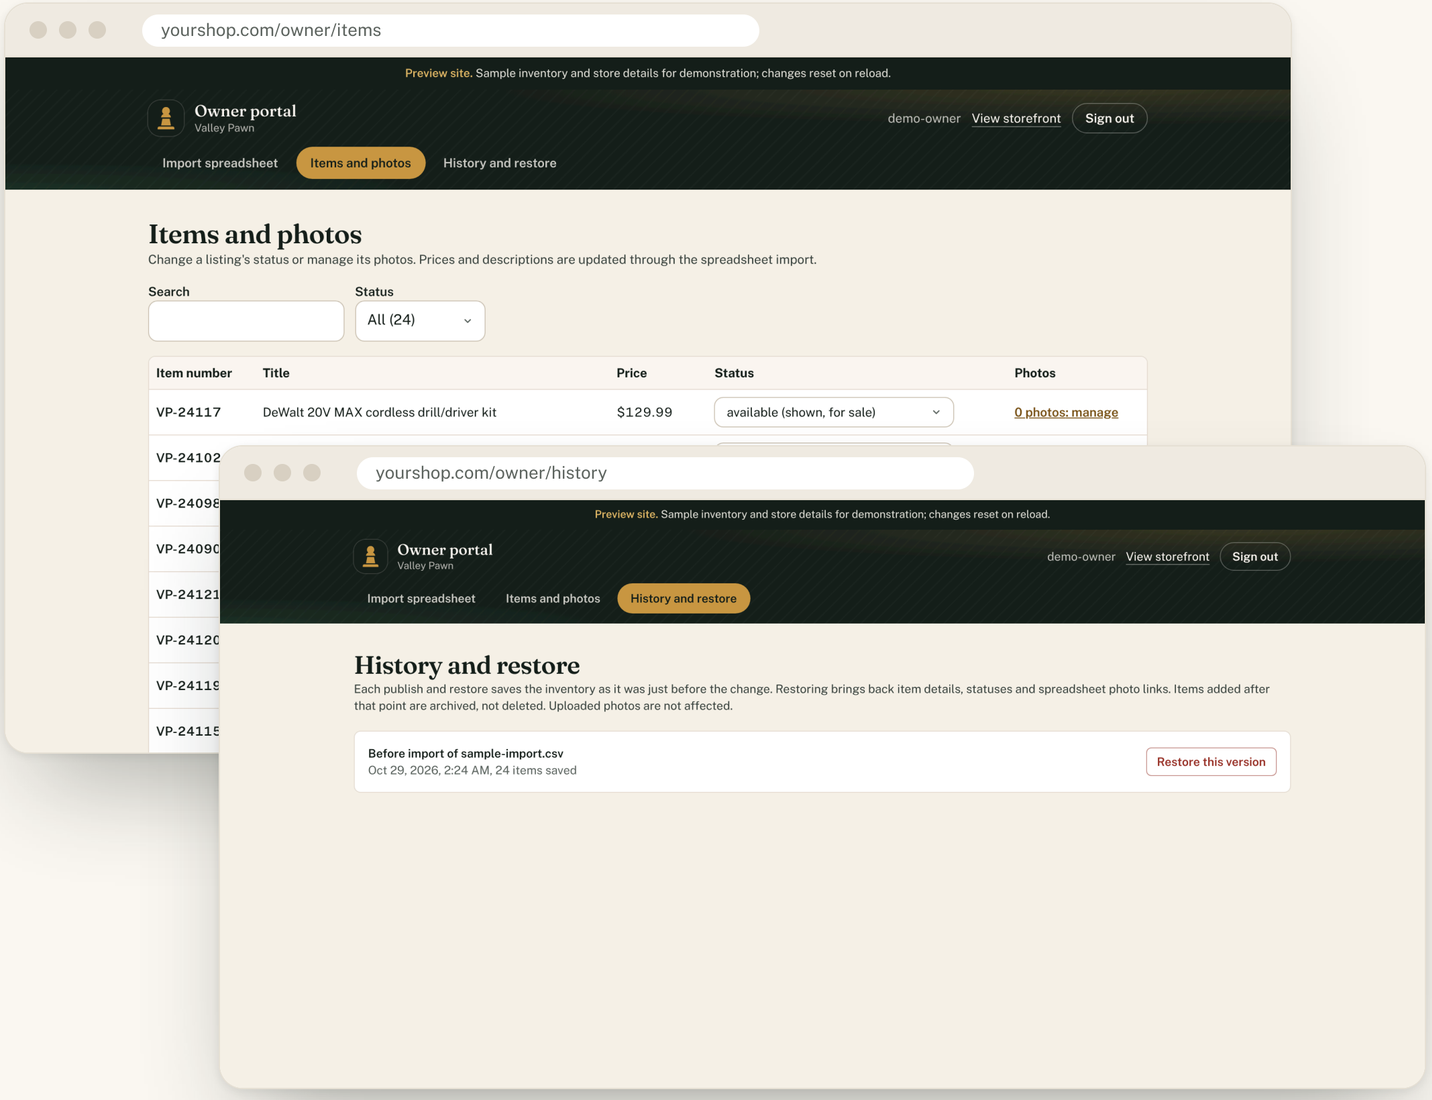

1 **Upload Excel or CSV**
Your existing file. Columns are matched automatically.

2 **Check the preview**
See exactly what's new, what changed and any rows with problems.

3 **Publish**
All changes go live together. Nothing changes until you click.

↺ **Undo anytime**
Every publish saves a restore point you can roll back to.

FOR YOU

You stay in control.

Drafts stay private
Hold items back until they're priced and photographed.

Photos from your phone
Snap, upload, reorder. Images are resized automatically.

Mark sold in one click
Change any item's status right from the list.

Full history
See every import and restore an earlier version.

UNDER THE HOOD

Built to be trusted with your business.

Secure by design

Only approved owner accounts can change anything. Hidden items are blocked by the database itself, not just the page.

All-or-nothing updates

An import either publishes completely or not at all. No half-updated catalog if something goes wrong.

Nothing gets lost

Items are archived, never deleted. Every publish saves a restore point.

Fast everywhere

Hosted on Vercel's global network with a Supabase database. Nothing to install or maintain in the shop.

Tested

More than 70 automated tests cover spreadsheet reading, publishing, restores, owner access and the storefront.

Accessible

Works with keyboards and screen readers, with readable type and strong contrast.

GETTING STARTED

From preview to live in four steps.

1

Your details

Shop name, logo, address, hours, phone, what you buy and lend on, and the promises you make to customers.

2

Set up accounts

Database, owner logins for you and any staff, and your web address.

3

Load inventory

Import your current spreadsheet, add photos of featured items, review drafts.

4

Go live

Launch, then share the link on Google, Facebook, receipts and the shop door.

What we need from you: your inventory spreadsheet as it is today, store hours and contact details, and a logo if you have one.

NEXT STEP

See it working with your inventory.

The preview runs today with sample items. Send over your current spreadsheet and we'll load it so you can click through your own shop.
